VOLIRO

Eric Anthony Decasper
[redacted]

19 December 2025

Reference Letter

Eric Anthony Decasper, born on 20 April 2004, has been employed by Voliro AG from 09 July 2025 until 31 December 2025 as a Mechanical Engineer Intern.

Voliro is at the forefront of the robotics industry to promote a new generation of drones capable of physical interaction with the world, truly making them flying robots.

Spun off from the world-renowned Autonomous Systems Lab of ETH Zurich in 2019, Voliro was awarded the Top Swiss Robotics Startup 2022, named one of the Top 10 most innovative companies in robotics 2023 worldwide, and won the Swiss Economic Award 2024.

After releasing our first-generation product in September 2022, we have proved product-market fit in early 2023. Now our mission is to create an unmatched customer experience and scale the business.

Headquartered in Zurich, Switzerland, our growth markets are in North America as well as Europe.

His main duties and responsibilities included:

- Develop and build prototypes to explore new payload capabilities doing spot repair
- Extensively test the built prototypes for flightworthiness and evaluate effectiveness
- Design parts for 3D printing, laser cutting and cnc milling
- Source necessary parts to build said prototypes
- Remastering of actively used drone components and assemblies in Solidworks derived from legacy CAD system

VOLIRO

From day one, Eric established himself as a trusted and well-integrated member of the team thanks to his open and communicative personality. This enabled him to quickly take ownership of his responsibilities, proactively engaging with colleagues to gather the information required to move tasks forward efficiently.

He consistently delivered ready-to-use product prototypes while working on highly open-ended engineering tasks. This required a high degree of flexibility and resilience in order to keep pace with evolving requirements and new technical insights.

Eric's strong work ethic, energy, and intrinsic motivation enabled him to repeatedly tackle new challenges and deliver functional robotics prototypes under tight time constraints, regularly exceeding expectations. He consistently demonstrated a willingness to go the extra mile. By doing so, he enabled fellow engineers and product management to make informed decisions regarding the future of the flying robotic platform by providing a robust robotics testbed on which payload concepts and flight-relevant ideas could be tested and verified. All that while laying a solid ground to productize the prototypes in the future. His structured and forward-looking approach to building CAD models ensured their usability and long-term maintainability beyond his tenure at the company.

We sincerely appreciate the contributions Eric made during his internship with us. He is leaving upon the completion of his fixed-term internship, and we thank him for his valuable work and wish him every success in his future professional pursuits, hoping that his path may lead him back to Voliro in the future.

Please do not hesitate to contact us if you require any further information.

Sincerely,

Voliro AG
